

Mayday-Guitar

technical informations and hardware setup

Following Brian May´s Red Special,
which he built together with its father,
and one of the greatest guitarists of all times,
which wrote music history with its unmistakable sound,
this guitar is my completely own interpretation of a legend.

This is your control panel, with switches and control pots:

Adjust the neck curvature

Remove the cover plate and turn the trussrod nut into the correct position. The neck curvature must be concave.

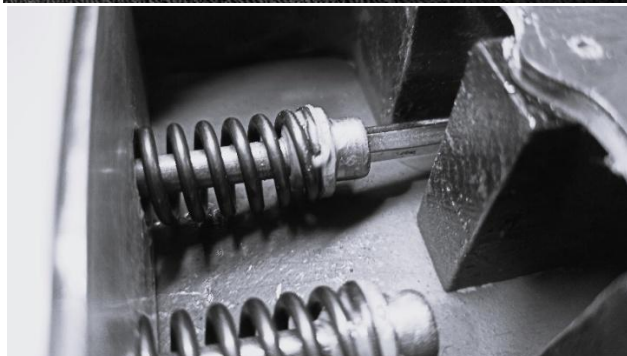

To check your neck curvature,
hold the strings down on first and last fret.
The distance should have 1,0 mm at the 7th fret.

Adjust the spring tension

Remove the cover plate to see the springs and insert the tool
through the opening.

Turn it to the correct spring tension.

Adjust the vibrato bar

Loosen the upper screw nut.

Turn the other nut into the right position and hold the bar.

Fasten the screw nuts

The screw nuts must be turned against each other.

Scheithauer

GUITARS

BUILT WITH INSPIRATION MUSIC

Tools included

The guitar includes all the tools and a typical sixpence coin 😊

Transport in the hardcase:

For transport or closing the case, please turn the vibrato bar
in this position to avoid pressure.

Have a lot of fun with the queen of guitars !
